Welcome

INNOVA INTEGRALIFT BROCHURE

The Integralift hoist introduces unparalleled innovation, offering a distinctive feature of complete foldability into a discreet cupboard, minimising visual impact. With various finishes and customizable options, it seamlessly integrates into diverse settings, from private homes to hospices. This mobility hoist reduces strain on carers, providing efficient lift and transfer solutions.

The tasteful design, available in different cabinet colours and styles, ensures a welcoming and unobtrusive presence. Ideal for those with limited mobility, the Integralift transforms spaces, offering a tailored and inclusive approach to patient handling while maintaining a cohesive aesthetic in any environment.

Integralift

HIDDEN HOIST

The Integralift Hoist is a discreet, integrated patient lifting solution designed to support safe, dignified transfers within care and healthcare environments. Installed directly into the room structure, it provides reliable assisted lifting without the visual or spatial impact of traditional ceiling hoist systems.

The Concept

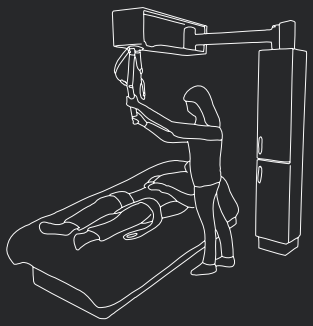

If fixed lifting equipment is required, we've got some good news for you. It no longer needs to detract from the appearance of the room in which it's fitted, as the Integralift is a unique patient-lifting solution that folds neatly away into fitted cabinets when not in use.

Representing a welcome alternative to conventional fixed hoists, the Integralift provides what you need, but leaves you with the environment that you want – tasteful, uncluttered and welcoming.

How it Works

1

Activate

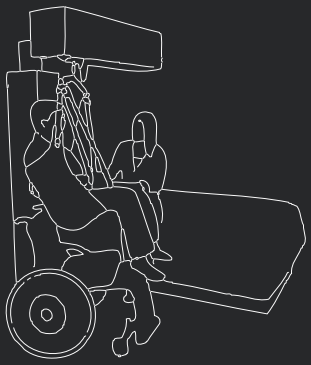

Open closet and pull out the lift.
Position the lift above the user.

2

Place the sling

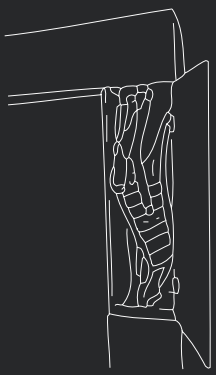

Position the sling under the user. Hook the sling on to the lifting bar. Make sure the lifting straps are inside the grooves of the lifting bar.

3

The transfer

Lift and position the user over the chair. Lower the user into the chair.

4

Completed

Place the lifting bar and the remote in their designated places. Swing the lift back to its wall position. Put the sling back in the closet.

Configure your Integralift

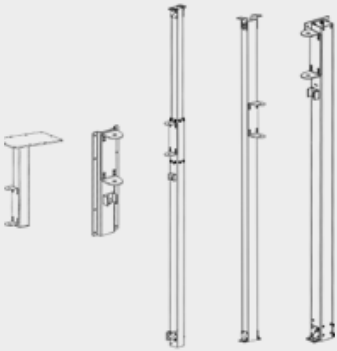

The Integralift is highly configurable, meaning that it is suited to virtually any environment, whether it be for a domestic setting, a hospital ward, or a hotel room.

1

Select your positioning

Choose from left or right versions, depending on the layout of your room.

2

Select your mounting option

Fix to block, brick, concrete or timber with Floor to Ceiling Structure, Wall Mount Structure, Inside Wall Structure (ideal for new builds as the whole post is hidden behind the wall), Concrete Wall Structure or Concrete Ceiling Structure options.

3

Select your cabinet design

Choose from hundreds of aesthetic configurations - change your cabinet colour or wood design, add an extra upright cupboard on the other side of the bed, or even make it into a bookshelf for use in a sitting room!

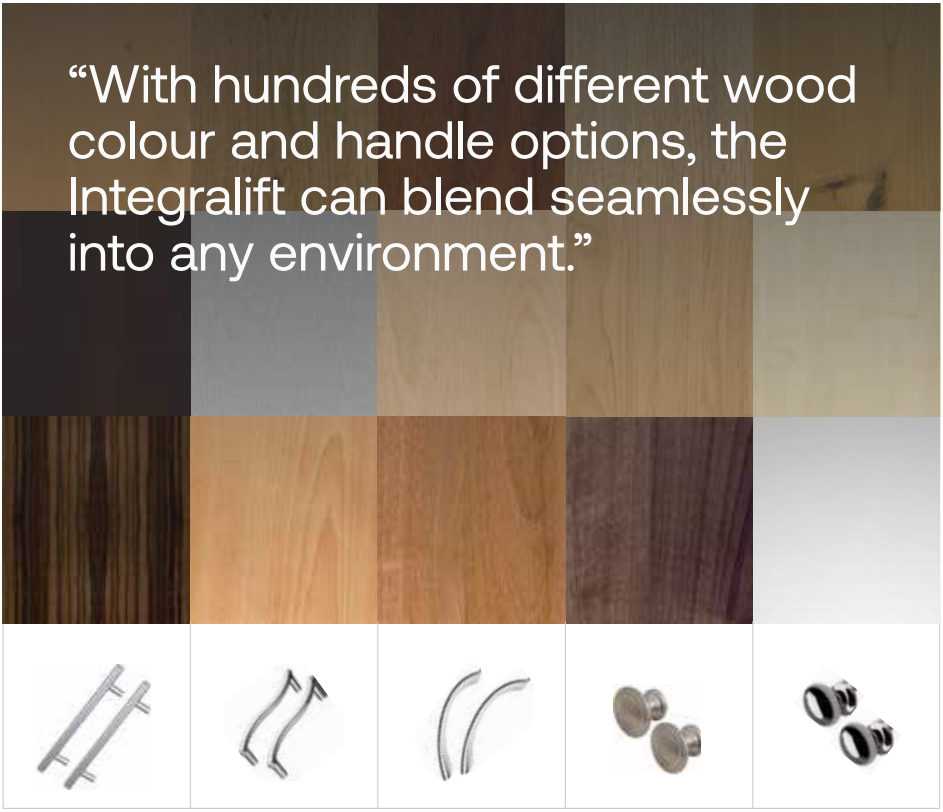

4

Select your options

Matching beds, bedside tables, wardrobes, and other furniture are all available to match your chosen Integralift™ cabinet. Different light fittings can be integrated in the top cupboard. For hospitals or hospices, choose from options such as integrated services including oxygen, lighting, laminate construction for infection control, and integrated drugs cabinets and wardrobes.

Integralift for Domestic use

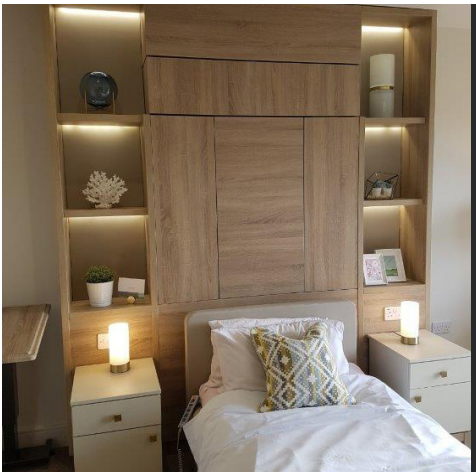

With hundreds of different options, the Integralift blends in seamlessly with existing décor and furniture.

Comfort in your own home

The Integralift is ideal for use in private homes. Private individuals love the way it blends into the environment seamlessly, matching with any decor. With different cabinet colours and styles, different handle types, and different configurations, this lifter is truly configurable.

In the past, clients were forced to choose between a mobile hoist (which can be difficult to use), or a ceiling track hoist (which can be difficult to install, and doesn’t always look the best). The Integralift is easy to install, causing minimal disruption, and is straightforward to use.

Integralift for Hospitals & Hospices

At Innova we believe that the Integralift is what hospitals and hospices have been waiting for - a patient hoist which is easy & safe to use, fully integrated into its surroundings, & better for infection control.

Left: The lifter can be integrated into a full ward cupboard system, incorporating storage space, medical gases, and many other facilities.

Efficient workflow

The Integralift has been designed to save caregivers' time during transfers. The lifter and sling are always ready for use, with everything stored in dedicated places. The hoist also never needs to be charged as it is wired up to the mains supply.

Easy to use

The Integralift is simple to use, meaning that nurses and other staff can be trained quickly and easily.

Convenience:
Hospices love the flexibility the Integralift offers. The hoist fits in with the homely surroundings, and is ready for use at any time as patient needs change.

Full integration

Services such as sockets, medical gases, vacuum systems, and nurse-call alarms can all be fitted into the same cabinet beside the bed for improved efficiency and enhanced aesthetics. Wardrobes, bedside cabinets, lockable drug storage compartments, patient lights, ward screens, and foldable beds for the friends and relatives of patients are just a few of the items which can be incorporated into the same cupboard structure. Unlike overhead hoist systems, the Integralift does not interfere with ceiling mounted ward curtains.

Infection control

When it comes to infection control, Integralift really comes into its own. Rather than long lengths of overhead ceiling track which cannot be cleaned, this product can be wiped with ease. The top of the hoist can be sloped if required, whilst the cabinet can be constructed from full thickness laminate for greater infection control.

Choose from a number of patient lighting options.
Services such as medical gases, nurse call systems, and electrical sockets can all be integrated into the cabinet.
Options such as lockable drugs cabinets, ward screens, and clothes hangers can be incorporated into the cabinet structure.

Integralift for Hotels

Five reasons for a hotel to install the Integralift

1. Hotels have a responsibility to provide for disabled people. Section 12.8.1 of British Standards 8300:2009 states: "For new buildings, the minimum provision of accessible bedrooms as a percentage of the total number of bedrooms should be 5% with a fixed tracked-hoist system or similar system giving the same degree of convenience and safety." The Integralift enables you to ensure you bedrooms meet the current requirements without detracting from the appearance of the room.

2. Figures released by VisitEngland show overnight trips made by, or accompanied by, someone with a health impairment or condition accounted for a leisure industry spend of almost £1 billion in six months. People with disabilities account for 20% of the average business' customer base and spend £80 billion per annum. It is also proven that people make a conscious decision NOT to visit somewhere if they believe they cannot use appropriate facilities.

3. Hotels with patient lifting equipment are frequented by disabled people. Many guesthouses have found great benefit in installing a hoist in terms of increased client footfall and customer loyalty, whilst many organisations & websites actively promote hotels with disabled facilities to a wide client group of disabled people.

4. Integralift is a low maintenance product. The hoist is always on charge with a battery back-up and all equipment required including the sling can be stored in the cabinet.

5. The Integralift can easily be installed in an existing room in your hotel. Innova supply, install and commission each unit in accordance with regulations.

"With 10 million disabled people in Britain, installing the Integralift in a hotel can make a big difference to client footfall and can result in increased revenue."

Installing the Integralift hoist is a fantastic way for hotels to move beyond their competition. By being able to accommodate for disabled users in a way that is not obtrusive or disturbing to clients, the hotel will be in a league of its own.
